**** DETERMINATION OF NO HAZARD TO AIR NAVIGATION ****

The Federal Aviation Administration has completed an aeronautical study under the provisions of 49 U.S.C., Section 44718 and, if applicable, Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure:	Tower
Location:	Aleknagik, AK
Latitude:	59-16-3.00 N NAD 83
Longitude:	158-37-35.20 W
Heights:	120 feet above ground level (AGL) 245 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure would have no substantial adverse effect on the safe and efficient utilization of the navigable airspace by aircraft or on the operation of air navigation facilities. Therefore, pursuant to the authority delegated to me, it is hereby determined that the structure would not be a hazard to air navigation provided the following condition(s) is(are) met:

As a condition to this Determination, the structure is marked and/or lighted in accordance with FAA Advisory Circular 70/7460-1 AC 70/7460-1K, Obstruction Marking and Lighting, red lights - Chapters 4,5(Red),&12

It is required that the enclosed FAA Form 7460-2, Notice of Actual Construction or Alteration, be completed and returned to this office any time the project is abandoned or:

____ At least 10 days prior to start of construction
(7460-2, Part I)

X Within 5 days after the construction reaches its greatest height
(7460-2, Part II)

See attachment for additional condition(s) or information.

This determination expires on 01/7/2008 unless:

- (a) extended, revised or terminated by the issuing office.
- (b) the construction is subject to the licensing authority of the Federal Communications Commission (FCC) and an application for a construction permit has been filed, as required by the FCC, within 6 months of the date of this determination. In such case, the determination expires on the date prescribed by the FCC for completion of construction, or the date the FCC denies the application.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION

MUST BE POSTMARKED OR DELIVERED TO THIS OFFICE AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE.

This determination is subject to review if an interested party files a petition that is received by the FAA on or before August 7, 2006. In the event a petition for review is filed, it must contain a full statement of the basis upon which it is made and be submitted in triplicate to the Manager, Airspace and Rules Division - Room 423, Federal Aviation Administration, 800 Independence Ave, Washington, D.C. 20591.

This determination becomes final on August 17, 2006 unless a petition is timely filed. In which case, this determination will not become final pending disposition of the petition. Interested parties will be notified of the grant of any review. For any questions regarding your petition, please contact Office of Airspace and Rules via telephone -- 202-267-8783 - or facsimile 202-267-9328.

This determination is based, in part, on the foregoing description which includes specific coordinates, heights, frequency(ies) and power. Any changes in coordinates, heights, and frequencies or use of greater power will void this determination. Any future construction or alteration, including increase to heights, power, or the addition of other transmitters, requires separate notice to the FAA.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

This aeronautical study considered and analyzed the impact on existing and proposed arrival, departure, and en route procedures for aircraft operating under both visual flight rules and instrument flight rules; the impact on all existing and planned public-use airports, military airports and aeronautical facilities; and the cumulative impact resulting from the studied structure when combined with the impact of other existing or proposed structures. The study disclosed that the described structure would have no substantial adverse effect on air navigation.

An account of the study findings, aeronautical objections received by the FAA during the study (if any), and the basis for the FAA's decision in this matter can be found on the following page(s).

A copy of this determination will be forwarded to the Federal Communications Commission if the structure is subject to their licensing authority.

If we can be of further assistance, please contact our office at (202)267-9219. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2006-AAL-154-OE.

NARRATIVE AERONAUTICAL STUDY NO. 2006-ANM-154-OE

Abbreviations

AGL - above ground level MSL - mean sea level RWY - runway
IFR - instrument flight rules VFR - visual flight rules
Part 77 - 14 Code of Federal Regulations (CFR) Part 77, Objects Affecting
Navigable Airspace

1. LOCATION OF PROPOSED CONSTRUCTION

The proposed 120 AGL (245 MSL) structure would be located approximately 4,880 feet south-southwest of the Runway (RWY) 33 threshold at Aleknagik (5A8) Airport, Alaska, across from Mosquito Point at the southeast end of Lake Aleknagik. Aleknagik RWY 33 threshold elevation: 66 MSL

2. OBSTRUCTION STANDARDS EXCEEDED

The proposed structure is identified as an obstruction under Part 77 standards as follows Section 77.25(a) The surface of a takeoff and landing area of an airport or any imaginary surface established under 77.23, 77.25, or 77.29; exceeds the VFR maneuvering areas for Category A and Category B aircraft (horizontal surface) at Aleknagik RWY 33 by 29 feet.

3. EFFECT ON AERONAUTICAL OPERATIONS

a. The impact on arrival, departure, and en route procedures for aircraft operating under VFR follows:

Adverse Impact - The proposed antenna would exceed the Part 77 horizontal surface by 29 feet. Aleknagik Airport runway is a Visual/Visual runway and is 90 feet wide by 2,041 feet long. The proposed tower is located 4880 feet south-southwest of airport across Mosquito Point and west of Marsh Mountain. It would be located at the end of the road running north out of Dillingham and to the three other airstrips in the Aleknagik area.

b. The impact on arrival, departure, and en route procedures for aircraft operating under IFR follows: None.

c. The impact on all-existing public-use airports and aeronautical facilities follows: None.

d. The impact on all planned public-use airports and aeronautical facilities follow: None.

e. The cumulative impact resulting from the proposed construction or alteration of a structure when combined with the impact of other existing or proposed structures follows: None.

4. CIRCULATION AND COMMENTS RECEIVED

The proposal was not circulated for public comment based upon the results of an internal aeronautical study.

5. DETERMINATION - NO HAZARD TO AIR NAVIGATION

It is determined that the proposed construction would not have a substantial adverse effect on the safe and efficient use of navigable airspace by aircraft.

6. BASIS FOR DECISION

The proposed antenna would exceed Part 77 horizontal surface by 29 feet and is

located along a VFR flyway north of Dillingham to Lake Aleknagik. The impact of the proposed structure can be mitigated with obstruction marking and lighting.

7. CONDITIONS

The structure shall be marked and lighted as outlined in chapters 4, 5, and 12, of Advisory Circular AC 70/7460-1K. The advisory circular is available online at http://www.faa.gov/ats/ata/ai/AC70_7460_1K.pdf. It is also free of charge, from the Department of Transportation, Subsequent Distribution Section, M-494.3, 400 7th Street, SW, Washington, DC 20590.

Within 5 days after the structure reaches its greatest height, proponent is required to file a FAA form 7460-2, Actual Construction notification, at the OE/AAA website (<http://oeaaa.faa.gov>). This will be the source document verifying the height and site elevation for submission to National Aeronautical Charting Office for charting on aeronautical charts.
